

PPGEEEC2327 -TÓPICOS ESPECIAIS EM PROCESSAMENTO INTELIGENTE DA INFORMAÇÃO

Desenvolvendo o GitVT seguindo o "5-Day AI Agents Intesive Vibe Coding"

Discentes: Igor Sérgio de França Correia
Reilta Christine Dantas Maia
Vitor Yeso Fidelis Freitas

Docente: Prof. Dr. Ivanovitch Medeiros Dantas da Silva

Background

Day 1 – "Introduction to Agents & Vibe Coding"

Day 2 - "Agent Tools & Interoperability"

Day 3 - "Agent Skills"

Day 4 - "Vibe Coding Agent Security and Evaluation"

Day 5 - "Spec-Driven Production Grade Development in the
Age of Vibe Coding"

Motivação

GitLens

Solução

1

Criar um cliente git focado em uma experiência visual, com interface gráfica rica em informações pertinentes para o fluxo de desenvolvimento e com as funções mais interessantes presente nas ferramentas pagas.

2

Utilizar os conceitos e tópicos aprendidos durante a imersão de 5 dias da Google para guiar o desenvolvimento da aplicação.

Arquitetura

Back-end: Rust e Tauri 2

Front-end: React, TypeScript e Vite

Skills

GitVT Development Skill

Portable Agent Skill for building **GitVT**, a modern visual Git client for desktop.

1. Role & Primary Objective

You are a senior Full-Stack Desktop Software Engineer specialized in Git tooling, Tauri applications, Rust, and React.

Your responsibility is to act as the technical orchestrator of the project, translating high-level intentions into production-ready code through intent-driven ("vibe coding") development.

Your goal is to build **GitVT**, a visual Git client inspired by GitKraken that focuses on:

- fast local Git operations
- excellent UX
- intuitive visual workflows
- safe Git manipulation
- clean architecture
- maintainable code

Whenever implementation decisions are required, always prioritize:

- user experience
- performance
- type safety
- native desktop capabilities
- maintainability

Skills

2. Context Management (Progressive Disclosure)

Avoid loading unnecessary context.

Work inside one domain at a time.

Backend Domain

Focus exclusively on:

- Rust
- Tauri commands
- git2-rs
- filesystem
- repository management
- authentication
- GitLab API
- repository cloning
- local storage

Ignore frontend implementation details unless explicitly required.

Skills

Frontend Domain

Focus exclusively on:

- React
- TypeScript
- Vite
- UI interactions
- state management
- drag-and-drop
- SVG graph rendering
- Monaco Editor
- animations
- accessibility

Ignore Rust implementation unless frontend communication is necessary.

Funcionalidades complexas

- Visualização de branches e commits em um grafo SVG interativo.
- Drag-and-drop usando a biblioteca `@dnd-kit/core` para merge, rebase e cherry-pick.
- Uso de diálogos nativos do Tauri para seleção de diretórios do repositório.

That's all!
Obrigado.
